Teraz wybieramy menu *Devices*

Home > Home Network

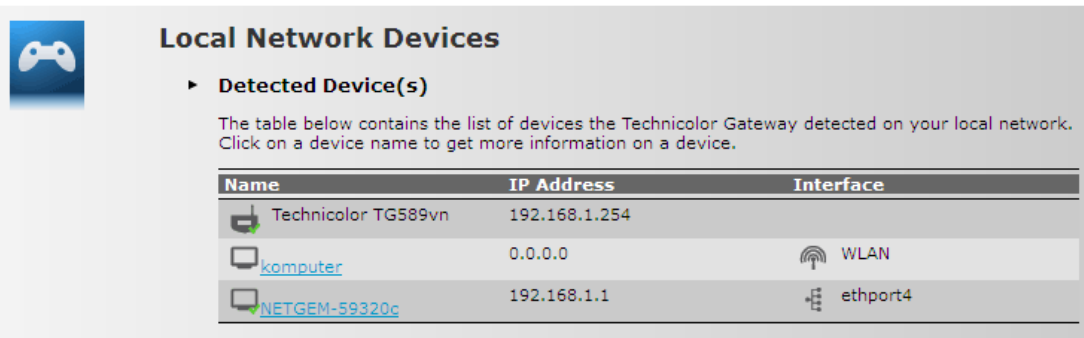

W sekcji *Device* klikamy na odnośnik *Assign the public IP address of a connection to a device*

Home > Home Network > Devices

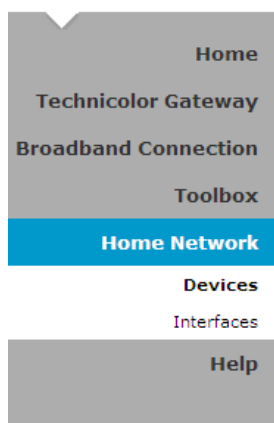

[Overview](#) | [Configure](#)

Pick a task...

- [Assign a game or application to a local network device](#)
- [Assign the public IP address of a connection to a device](#)

Klikamy przycisk *Edit*

Home > Home Network > Devices > Assign Public IP

Z rozwijanej listy wybieramy dostępne urządzenia i klikamy *Apply*

Home > Home Network > Devices > Assign Public IP

### Assign the public IP address of a connection to a LAN device

This page allows you to assign the public IP address of your Internet Connection(s) to a specific device on your local network...

You might want to do this if:

- You encounter issues with some applications through the Network Address Translation engine of your Technicolor Gateway.
- This device is running server applications (web server, ...) and you want it to be accessible from the internet.
- This device has to be considered as the unique entry to your local network (DMZ).

Internet Service	Device		
Internet	NETGEM-59320c	Apply	Cancel

Potwierdzamy *OK*.

After assigning the public ip address you have to

- (1) release the current private ip address of this device.
- (2) renew the ip address of this device in order to acquire the public ip address

Are you sure ?

OK Anuluj

Od tej pory wybrane urządzenie będzie pracować w *DMZ*.

Home > Home Network > Devices > Assign Public IP

### Assign the public IP address of a connection to a LAN device
